

SUPPORT PHYSICS WITHOUT FRONTIERS

OUR VISION

ICTP **Physics Without Frontiers (PWF)** works to **teach, train, and inspire** physics and mathematics **university students** worldwide, with a focus on countries in the **Global South**, to help build the **next generation** of scientists.

OUR MISSION

Our mission is to break down barriers to accessing physics and mathematics training and research for students in the Global South and in particular those from less represented groups. Along with our intensive **training** programmes we provide **careers** and **opportunities** sessions and **mentoring**.

OUR IMPACT

We have worked with over **180 universities** in **56 countries**, impacting over **16,000 students** worldwide, organising hundreds of activities and events! We have co-enabled several **universities** to obtain equipment, funding and infrastructure to stimulate **research environments**.

FUNDING MODEL

At the heart of Physics Without Frontiers is our international **volunteer network** of passionate physicists who **partner** with local institutions, international organisations, and other funders to support the project. We leverage our funding to support around **25-35 projects** a year, with costs averaging **2-5k Euro** each, impacting **hundreds of students** annually.

PWF ALUMNI

Over **800 students** have benefited from **PWF activities** and gone on to further study, with alumni now pursuing careers as **PhD students, postdocs, & faculty members** around the world, and in their home countries. Many also volunteer for PWF!
